## Important safety information

Read these instructions carefully. Only then will you be able to operate your appliance safely and correctly. Retain the instruction manual and installation instructions for future use or for subsequent owners.

The appliance can only be used safely if it is correctly installed according to the safety instructions. The installer is responsible for ensuring that the appliance works perfectly at its installation location.

This appliance is intended for domestic use and the household environment only. The appliance is not intended for use outside. Do not leave the appliance unattended during operation. The manufacturer is not liable for damage which is caused by improper use or incorrect operation.

This appliance is intended for use up to a maximum height of 2000 metres above sea level.

This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.

Children must not play with, on, or around the appliance. Children must not clean the appliance or carry out general maintenance unless they are at least 8 years old and are being supervised.

Keep children below the age of 8 years old at a safe distance from the appliance and power cable.

Check the appliance for damage after unpacking it. Do not connect the appliance if it has been damaged in transport.

This appliance is not intended for operation with an external clock timer or a remote control.

### Warning – Danger of suffocation!

Packaging material is dangerous to children. Never allow children to play with packaging material.

### Warning – Danger of death!

Risk of poisoning from flue gases that are drawn back in.

Always ensure adequate fresh air in the room if the appliance is being operated in exhaust air mode at the same time as room air-dependent heat-producing appliance is being operated.

Room air-dependent heat-producing appliances (e.g. gas, oil, wood or coal-operated heaters, continuous flow heaters or water heaters) obtain combustion air from the room in which they are installed and discharge the exhaust gases into the open air through an exhaust gas system (e.g. a chimney).

In combination with an activated vapour extractor hood, room air is extracted from the kitchen and neighbouring rooms - a partial vacuum is produced if not enough fresh air is supplied. Toxic gases from the chimney or the extraction shaft are sucked back into the living space.

- Adequate incoming air must therefore always be ensured.
- An incoming/exhaust air wall box alone will not ensure compliance with the limit.

Safe operation is possible only when the partial vacuum in the place where the heat-producing appliance is installed does not exceed 4 Pa (0.04 mbar). This can be achieved when the air needed for combustion is able to enter through openings that cannot be sealed, for example in doors, windows, incoming/exhaust air wall boxes or by other technical means.

In any case, consult your responsible Master Chimney Sweep. He is able to assess the house's entire ventilation setup and will suggest the suitable ventilation measures to you.

Unrestricted operation is possible if the vapour extractor hood is operated exclusively in the circulating-air mode.

**⚠ Warning – Risk of fire!**

- Grease deposits in the grease filter may catch fire.  
**Clean the grease filter at least once a month.**  
Never operate the appliance without the grease filter.
- Grease deposits in the grease filter may catch fire. Never work with naked flames close to the appliance (e.g. flambéing). Do not install the appliance near a heat-producing appliance for solid fuel (e.g. wood or coal) unless a closed, non-removable cover is available. There must be no flying sparks.
- Hot oil and fat can ignite very quickly. Never leave hot fat or oil unattended. Never use water to put out burning oil or fat. Switch off the hotplate. Extinguish flames carefully using a lid, fire blanket or something similar.
- When gas burners are in operation without any cookware placed on them, they can build up a lot of heat. A ventilation appliance installed above the cooker may become damaged or catch fire. Only operate the gas burners with cookware on them.
- Operating several gas burners at the same time gives rise to a great deal of heat. A ventilation appliance installed above the cooker may become damaged or catch fire. Never operate two gas burners simultaneously on the highest flame for longer than 15 minutes. One large burner of more than 5 kW (wok) is equivalent to the power of two gas burners.

**⚠ Warning – Risk of burns!**

The accessible parts become very hot when in operation. Never touch hot parts. Keep children at a safe distance.

**⚠ Warning – Risk of injury!**

- Components inside the appliance may have sharp edges. Wear protective gloves.
- Items placed on the appliance may fall down. Do not place any objects on the appliance.
- The light emitted by LED lights is very dazzling, and can damage the eyes (risk group 1). Do not look directly into the switched on LED lights for longer than 100 seconds.

**⚠ Warning – Risk of electric shock!**

- A defective appliance may cause electric shock. Never switch on a defective appliance. Unplug the appliance from the mains or switch off the circuit breaker in the fuse box. Contact the after-sales service.
- Incorrect repairs are dangerous. Repairs may only be carried out and damaged power cables replaced by one of our trained after-sales technicians. If the appliance is defective, unplug the appliance from the mains or switch off the circuit breaker in the fuse box. Contact the after-sales service.
- Do not use any high-pressure cleaners or steam cleaners, which can result in an electric shock.

**Causes of damage****Caution!**

Risk of damage due to corrosion. Always switch on the appliance while cooking to avoid condensation. Condensate can produce corrosion damage.

Always replace faulty bulbs to prevent the remaining bulbs from overloading.

Risk of damage due to ingress of humidity into the electronic circuitry. Never clean operator controls with a wet cloth.

Surface damage due to incorrect cleaning. Clean stainless steel surfaces in the direction of the grain only. Do not use any stainless steel cleaners for operator controls.

Surface damage due to strong or abrasive cleaning agents. Never use strong and abrasive cleaning agents.

Risk of damage from returning condensate. Install the exhaust duct in such a way that it falls away from the appliance slightly (1° slope).

## Environmental protection

Your new appliance is particularly energy-efficient. Here you can find tips on how to save even more energy when using the appliance, and how to dispose of your appliance properly.

### Saving energy

- During cooking, ensure that there is a sufficient supply of air to enable the extractor hood to work efficiently and with a low level of operating noise.
- Adjust the fan speed to the amount of steam produced during cooking. Only use intensive mode when required. The lower the fan speed, the less energy is consumed.
- If cooking produces large amounts of steam, select a higher fan speed in good time. If the cooking steam has already spread around the kitchen, the extractor hood will need to be operated for longer.
- Switch off the extractor hood if you no longer require it.
- Switch off the lighting if you no longer require it.
- Clean and (if required) replace the filter at regular intervals in order to increase the effectiveness of the ventilation system and to prevent the risk of fire.
- Put the lid on to reduce cooking steam and condensation.

### Environmentally-friendly disposal

Dispose of packaging in an environmentally-friendly manner.

This appliance is labelled in accordance with European Directive 2012/19/EU concerning used electrical and electronic appliances (waste electrical and electronic equipment - WEEE). The guideline determines the framework for the return and recycling of used appliances as applicable throughout the EU.

## Operating modes

### Exhaust air mode

The air which is drawn in is cleaned by the grease filters and conveyed to the exterior by a pipe system.

**Note:** The air must not be discharged into a flue that is used for exhausting fumes from appliances burning gas or other fuels (not applicable to appliances that only discharge the air back into the room).

- Before conveying the exhaust air into a non-functioning smoke or exhaust gas flue, obtain the consent of the heating engineer responsible.
- If the exhaust air is conveyed through the outer wall, a telescopic wall box should be used.

### Air recirculation

The air which is drawn in is cleaned by the grease filters and an activated carbon filter, and is conveyed back into the kitchen.

**Note:** To bind odours in air recirculation mode, you must install an activated carbon filter. The different options for operating the appliance in air recirculation mode can be found in the brochure. Alternatively, ask your dealer. The required accessories are available from specialist retailers, from customer service or from the Online Shop.

## Operating the appliance

These instructions apply to several appliance variants. It is possible that individual features are described which do not apply to your appliance.

**Note:** Switch on the extractor hood when you start cooking and switch it off again several minutes after you have finished cooking. This is the most effective way of removing the kitchen fumes.

### Control panel

### Explanation

ⓘ	Switches off the fan
1	Fan setting 1
2⌚	Fan setting 2/Run-on function
3i	Fan setting 3/intensive mode
⊕	Switches the lighting on/off

## Switching the appliance on and off

### Switching on the appliance

Press button 1.

The extractor hood starts at fan setting 1.

### Selecting the fan setting

Press the 2⌚ or 3i button to set the corresponding fan setting.

### Switching off the appliance

Press the ⓘ button.

## Intensive setting

You can use the intensive setting if there is a large build-up of odours and fumes/vapours.

- To activate intensive mode, press and hold the 3i button for 2 seconds.  
To confirm the setting, the ⓘ button lights up and the 3i button flashes.
- To end intensive mode early, press the ⓘ button.

**Note:** Intensive mode runs for 10 minutes. Once this time has elapsed, the appliance switches back to the fan setting that was last selected.

## Run-on function

The run-on function allows the extractor hood to continue running for a few minutes after it has been switched off. This eliminates any remaining cooking smells. The extractor hood will then switch itself off automatically.

### Switching on

- Press and hold the 2⌚ button.
- Press the button for the required fan setting 1, 2⌚ or 3i.  
The ⓘ button and the button for this fan setting flash.

### Notes

- The run-on time for all fan settings is 30 minutes. Once this time has elapsed, the ventilation system switches off automatically.
- The fan setting can be changed during the run-on time by pressing and holding the required power level.

### Switching off

Press and hold the 2⌚ button.

The fan run-on will end before the remaining run-on time has elapsed.

## Lighting

The lighting can be switched on and off independently of the ventilation system.

### Switching on or off

Press the ⊕ button.

## Cleaning and maintenance

### **Warning – Risk of burns!**

The appliance becomes hot during operation. Allow the appliance to cool down before cleaning.

### **Warning – Risk of electric shock!**

Penetrating moisture may result in an electric shock. Clean the appliance using a damp cloth only. Before cleaning, pull out the mains plug or switch off the circuit breaker in the fuse box.

### **Warning – Risk of electric shock!**

Do not use any high-pressure cleaners or steam cleaners, which can result in an electric shock.

### **Warning – Risk of injury!**

Components inside the appliance may have sharp edges. Wear protective gloves.

## Cleaning agents

To ensure that the different surfaces are not damaged by using the wrong cleaning agent, observe the information in the table. Do not use any of the following:

- Harsh or abrasive cleaning agents,
- Cleaning agents with a high alcohol content,
- Hard scouring pads or cleaning sponges,
- High-pressure cleaners or steam cleaners.

Wash new sponge cloths thoroughly before use.

Follow all instructions and warnings included with the cleaning agents.

Area	Cleaning agent
Stainless steel	Hot soapy water: Clean with a dish cloth and then dry with a soft cloth. Clean stainless steel surfaces in the grind direction only. Special stainless steel cleaning products are available from our after-sales service or from specialist retailers. Apply a very thin layer of the cleaning product with a soft cloth.
Painted surfaces	Hot soapy water: Clean using a damp dish cloth and dry with a soft cloth/towel. Do not use any stainless steel cleaners.
Aluminium and plastic	Glass cleaner: Clean with a soft cloth.
Glass	Glass cleaner: Clean with a soft cloth. Do not use a glass scraper.
Controls	Hot soapy water: Clean using a damp dish cloth and dry with a soft cloth/towel. Risk of electric shock caused by penetrating moisture. Risk of damage to the electronics from penetrating moisture. Never clean operating controls with a wet cloth. Do not use any stainless steel cleaners.

## Removing and installing the filter

The filter must be serviced regularly in order to guarantee efficient filtration of odours and grease.

### Metal grease filter

The metal grease filters must be cleaned every 20 operating hours or at least every 2 weeks.

### **Warning – Risk of fire!**

Fatty deposits in the grease filter may catch fire. **Clean the grease filter at least every 2 weeks.** Never operate the appliance without a grease filter.

### Removing metal grease filter

### **Warning – Risk of injury!**

The metal grease filters and components inside the appliance may have sharp edges. Wear protective gloves.

### **Warning – Risk of injury!**

The metal grease filters are very heavy. Remove the metal grease filters carefully and secure them against falling down when doing so.

1. Open the lock and swing the metal grease filter down.

### Notes

- When you do this, take hold of the metal grease filter from underneath with your other hand. Make sure that the metal grease filter does not fall and damage the hob.
  - Fat may accumulate in the bottom of the metal grease filter. Hold the metal grease filter level to prevent fat from dripping out.
2. Clean the metal grease filters.
  3. Clean the inside of the appliance.

## Cleaning the metal grease filters

### **⚠ Warning – Risk of fire!**

Fatty deposits in the grease filter may catch fire.

**Clean the grease filter at least every 2 weeks.**

Never operate the appliance without a grease filter.

### Notes

- Do not use any aggressive, acidic or alkaline cleaning agents.
- When cleaning the metal grease filters, also clean the holder for the metal grease filters in the appliance using a damp cloth.
- The metal grease filters can be cleaned in the dishwasher or by hand.

### By hand:

**Note:** You can use a special grease solvent for stubborn dirt. It can be ordered via the Online Shop.

- Soak the metal mesh grease filters in a hot soapy solution.
- Clean the filters with a brush and then rinse them thoroughly.
- Leave the metal mesh grease filters to drain.

### In the dishwasher:

**Note:** If the metal mesh grease filters are cleaned in the dishwasher, slight discoloration may occur. This has no effect on the function of the metal mesh grease filters.

- Do not clean heavily soiled metal mesh grease filters together with utensils.
- Place the metal mesh grease filters loosely in the dishwasher. The metal mesh grease filters must not be wedged in.

## Installing the metal grease filter

With the lock facing the front, insert the metal grease filter into the underside of the appliance and engage the lock.

**Note:** When pushing the filter in, make sure the lock engages. Otherwise, the metal grease filter may fall and damage the hob.

## Changing the active carbon filter (only in circulating-air mode)

To ensure effective odour removal, the filters must be serviced regularly.

The active carbon filters must be replaced at least every 4 months.

**Note:** The active carbon filters cannot be cleaned or reactivated.

1. Remove the metal grease filters, see above.
2. Push back the fastening hooks.
3. Remove the old active carbon filter.
4. Insert the new active carbon filter and secure it in place using the fastening hooks.

5. Fit the metal grease filters.

## Accessories

### Special accessories

**Note:** Special accessories are not included in the delivery. Special accessories can be purchased from our after-sales service, from specialist retailers, or online.

Accessory	Order number
Recirculation Kit - DWBxxxxx / DWGxxxxx (1x active carbon filter, back flap, clamping ring)	DHZ5467
Active Carbon Filter	DHZ5477
Flue Duct Extension With Bracket - DWBxxxxx / DWGxxxxx	DHZ5640

## Trouble shooting

Malfunctions often have simple explanations. Please read the following notes before calling the after-sales service.

### **Warning – Risk of electric shock!**

Incorrect repairs are dangerous. Repairs may only be carried out and damaged power cables replaced by one of our trained after-sales technicians. If the appliance is defective, unplug the appliance from the mains or switch off the circuit breaker in the fuse box. Contact the after-sales service.

### **LED lights**

Defective LED lights must only be replaced by the manufacturer, their customer service department or a licensed technician (electrician).

### Malfunction table

Problem	Possible cause	Solution
The appliance does not work	The plug is not plugged in.	Connect the appliance to the electricity supply
	Power cut	Check whether other kitchen appliances are working
	Faulty fuse	Check in the fuse box to make sure that the fuse for the appliance is OK
The lighting is not working	The LED lights are defective	Call the after-sales service

 **Customer service**

When calling us, please give the product number (E no.) and the production number (FD no.) so that we can provide you with the correct advice. The rating plate with these numbers can be found inside the appliance (remove the metal grease filter to gain access).

You can make a note of the numbers of your appliance and the telephone number of the after-sales service in the space below to save time should it be required.

E no.	FD no.
<b>After-sales service</b> 	

Please be aware that a visit by an after-sales engineer will be charged if a problem turns out to be the result of operator error, even during the warranty period.
