10.6 Data protection

Please see the information on data protection.

The first time your appliance is registered on a home network connected to the Internet, your appliance will transmit the following types of data to the Home Connect server (initial registration):

■ Unique appliance identification (consisting of appliance codes as well as the MAC address of the Wi-Fi communication module installed).

■ Security certificate of the Wi-Fi communication module (to ensure a secure data connection).

■ The current software and hardware version of your appliance.

■ Status of any previous reset to factory settings.

This initial registration prepares the Home Connect functions for use and is only required when you want to use the Home Connect functions for the first time.

Note: Please note that the Home Connect functions can only be utilised with the Home Connect app. Information on data protection can be retrieved in the Home Connect app.

11 Refrigerator compartment

You can keep dairy products, eggs, prepared meals, pastries, open preserves and hard cheese in the refrigerator compartment.

The temperature can be set from 3 °C to 8 °C.

The refrigerator compartment can also be used to store highly perishable foods in the short to medium term. The lower the selected temperature, the longer the food remains fresh.

11.1 Tips for storing food in the refrigerator compartment

■ Only store food when fresh and undamaged.

■ Store food covered or in air-tight packaging.

■ Allow hot food and drinks to cool down first before placing in the appliance.

■ Observe the best-before date or use-by date specified by the manufacturer.

11.2 Chill zones in the refrigerator compartment

The air circulation in the refrigerator compartment creates different chill zones.

Coldest zone

The coldest zone is on the partition and in the door rack for large bottles.

Tip: Store highly perishable food such as fish, sausages and meat in the cool-fresh compartment.
→ *"Cool-fresh compartment", Page 40*

Warmest zone

The warmest zone is at the very top of the door.

Tip: Store food that does not spoil easily in the warmest zone, e.g. hard cheese and butter. Cheese can then continue to release its aroma and the butter will still be easy to spread.

12 Cool-fresh compartment

In the cool-fresh compartment, you can keep fresh food fresh three times longer than in the refrigerator compartment.
The temperature in the cool-fresh compartment is kept at around 0 °C. Storing food in the fresh compartment retains the quality of the food better. The low temperature and the optimum moisture provide ideal storage conditions for fresh food.

12.1 Storage times in the cool-fresh compartment at 0 °C

The storage times are dependent on the original quality of your food.

Food	Storage time
Fresh fish, seafood	up to 3 days
Poultry, meat (boiled/fried)	up to 5 days
Beef, pork, lamb, sausage (cold meat)	up to 7 days
Smoked fish, broccoli	up to 14 days
Salad greens, fennel, apricots, plums	up to 21 days

Food	Storage time
Soft cheese, yoghurt, quark, buttermilk, cauliflower	up to 30 days
